## Installation

1. Starting in the front wheel area, pull the cover down over the windshield and tuck the elastic hem under the centerline of the wheel(s).
2. Working toward the rear of the vehicle, slide the cover down the sides, avoiding snag points. The cover should be long enough to allow the elastic hem to fully wrap below the center line of the rear wheel(s) and have a tight fit along the perimeter.
3. Care should also be taken to avoid placing the material against hot engine components, as burning or melting may occur.

## Important Safety Warnings

1. **TAIL PIPES:** A hot exhaust tail pipe may melt the cover. Wait approximately 10 to 15 minutes for cool down before installing the cover.
2. **HIGH WINDS:** In severely windy conditions, ballooning of the cover may occur. It is strongly recommended that your motorcycle be sheltered whenever high winds are expected. Using an optional (not included) bungee cord or cable through the grommet areas may also help prevent ballooning.
3. **SNAG POINTS:** Mirrors, muffler ends, shifters, brakes, and foot pegs are common wear points. Do not allow the cover fabric to snag around them. Antennas are capable of puncturing the cover - use extreme care.

## Cleaning

1. Normal dirt and grime should be brushed off with a soft terry cloth or removed with warm water and a mild detergent using a sponge or terry cloth. The cover should be thoroughly dried before using.
2. Do not place the cover in a washing machine and do not wring or twist the cover to remove moisture.
